

Sr. No.	Query	Clarification
1.	Also in case it's made a mandate that the V-Sat modem should be IPv6 compliant in present scenario, will lead to single party bid participation and proprietary product installation which will become a commercial and technology bottlenecks for future upgrade to UPCBL.	Tender Says IPv6 compliant router.
2.	It is also suggested that dependency on any 1 access medium (such as VSAT) for the whole network may lead to network with bottlenecks like permission and performance issues.	No change.
3.	Considering the remote areas where UPCBL branches are located, it is suggested that a complete MPLS hybrid solution including last miles of RF, V-Sat and Dongle private APN will be the best and most suitable connectivity solution.	There is no restriction to present such solution. No change in tender document.
